: The Economic Mirror is prepared based on statistical data available by 7<sup>th</sup> July 2016.

On 1 January 2008, the new classification of activities of business entities NACE Rev. 2, which replaced NACE Rev. 1.1, came into force in all EU Member States. In the Republic of Slovenia the national version of the standard classification, SKD 2008, took effect. It includes the entire European classification of activities but also adds some national subclasses. All analyses in the Slovenian Economic Mirror are based on SKD 2008, except when the previous classification, SKD 2002, is explicitly referred to. For more information on the introduction of the new classification see the SURS website http://www.stat.si/eng/skd\_nace\_2008.asp.

i.....i

All current comparisons (at the monthly, quarterly levels) in the Slovenian Economic Mirror are made on the basis of seasonally adjusted data, while year-on-year comparisons are based on original data. Unless otherwise indicated, all seasonally adjusted data for Slovenia are calculations by IMAD.

Short-term indicators of economic activity and confidence indicate that GDP growth in the euro area continued in the second quarter but is expected to be lower than in previous quarters. In manufacturing, activity rose slightly in April; in retail trade and construction it has been stagnant for several months. After deteriorating in the first quarter, the values of confidence indicators did not change significantly in the second quarter and remained close to the highest levels seen in the last few years. Labour market conditions are improving and favourably affect private consumption, which will also remain the main driver of GDP growth this year according to the forecasts by international institutions. Oil and commodity prices are rising, but are still notably lower than in previous years.

The United Kingdom's referendum decision to leave the EU brings a great deal of uncertainties about the economic and political situation in Europe. According to international institutions, a protracted process of withdrawal would have negative implications for both the EU and the United Kingdom. The effects on Slovenia's economy would be mostly indirect, through the expected decline in economic growth in Slovenia's main trading partners, which would contribute to lower demand for Slovenia's goods and services.

At the beginning of the second quarter, most short-term indicators of economic activity in Slovenia increased further. With favourable movements in cost competitiveness and foreign demand, merchandise exports and manufacturing production continued to expand. After several months of decline, activity also rose in construction but remained low. The improvement in labour market conditions and the strengthening of private consumption contributed to further turnover growth in some segments of trade and in tourism-related services. In most other market services, turnover has not increased in the last months. The economic sentiment indicator also indicates a gradual strengthening of activity in most sectors in the following months.

**The labour market situation remains favourable.** In April the number of employed persons continued to rise. Further growth was recorded for most private sector activities, particularly manufacturing, distributive trades, accommodation and food service activities, and transportation. The prospects for employment growth also remain favourable in most activities. In June the number of registered unemployed declined further, owing to a stronger outflow into employment and a smaller inflow into unemployment. At the end of the month 99,795 persons were registered as unemployed, which is 9.5% less than in the same period of 2015. After a long period of increase, the growth of average gross earnings per employee came to a halt in April, but in the first four months, the private and the public sector nevertheless recorded the largest year-on-year increases in five years.

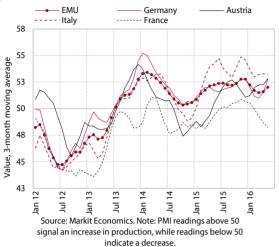

**Consumer prices rose year-on-year in June for the first time in one and a half years.** Higher prices were recorded particularly for services; the negative contribution of energy prices was also smaller. Core inflation, which has come closer to the core inflation in the euro area in the last few months, thus strengthened further. Prices of semi-durable goods and, for the first time this year, food were higher year-on-year, while prices of durable goods were lower.

The competitiveness of the tradable sector improved further in the first quarter, especially in manufacturing, the sector that is the most exposed to foreign competition. The improvement was a consequence of strong productivity growth, which enabled wage growth and a concurrent improvement in the competitive position of the tradable sector. At the level of the entire economy, unit labour costs otherwise stopped falling because of their growth in the non-tradable sector. Owing to a decline in relative consumer prices, the price competitiveness of the economy remained favourable despite the appreciation of the euro.

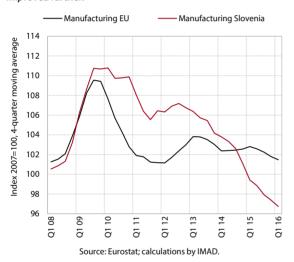

**The decline in the volume of loans to domestic non-banking sector continues to slow.** The fall in loans to enterprises and NFIs has stabilised in recent months while the volume of household loans is rising. The net deleveraging of enterprises and NFIs abroad has also moderated notably, as they increased the volume of short-term credits. The share of non-performing claims has declined further and stood at 8.0% at the end of April. Among sources of finance, banks continued to repay their foreign liabilities while non-banking sectors increased deposits. The maturity structure of deposits continues to deteriorate, as growth is mainly recorded for overnight deposits.

In the first four months the general government deficit on a cash basis was smaller year-on-year. Revenues otherwise decreased slightly year-on-year, mainly as a result of the lower inflows from the EU budget, while the improvement in the economic situation showed in higher revenues from social contributions, personal income tax and VAT. Expenditures declined even more year-on-year, primarily owing to a decline in investment related to the delay in EU funds absorption at the beginning of the new financial perspective of the EU.

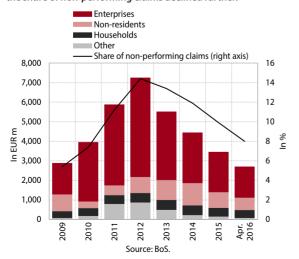

The PMI indicates growth in manufacturing in most main trading partners.

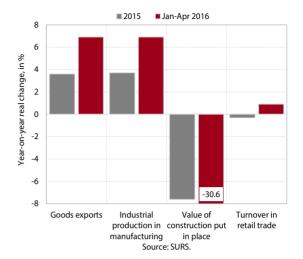

### Competitiveness in the export-oriented part of the economy improved further.

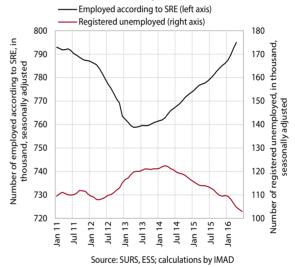

### The situation in the banking system also improved; the stock and the share of non-performing claims declined further.

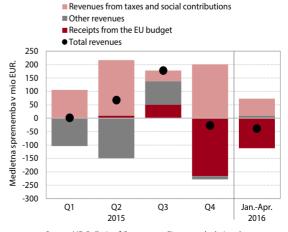

### Exports remain the main driver of GDP growth in Slovenia.

### The economic situation and confidence in further recover continue to have a favourable impact on the labour market.

### The main factor in the decline in general government revenue is the year-on-year decrease in inflows from the EU budget.

# current economic trends

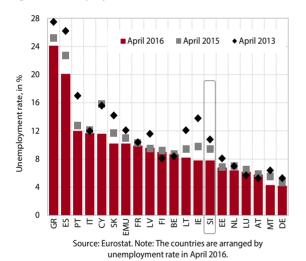

### International environment

Figure 1: Short-term indicators of economic activity in the euro area

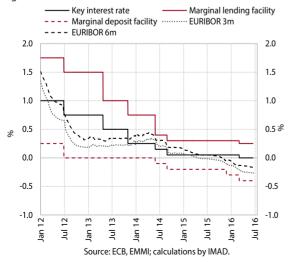

Short-term indicators of economic activity and confidence indicate that GDP growth in the euro area continued in the second quarter, but is expected to be slightly lower than in previous quarters. In manufacturing, activity rose slightly in April; in retail trade and construction it has been stagnant for several months. After two months of slight growth, the value of the Economic Sentiment Indicator (ESI)¹ did not change significantly in June and remained close to the highest levels in the last few years. The manufacturing PMI indicates growth in most main trading partners.

Figure 2: Unemployment rates in euro area countries

Labour market conditions in the euro area continue to improve. In April the unemployment rate (10.2%) was around 2 percentage points lower than three years before when it had reached its high. With a further improvement on the euro area labour market, private consumption will remain the main driver of economic growth, according to the forecasts by the EC and ECB.

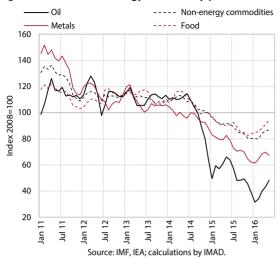

Figure 3: ECB interest rates and Euribor

The ECB left its interest rates unchanged in June and started to implement additional measures to ensure long-term price stability. Interbank interest rates dropped further owing to the beginning of the corporate sector asset purchase programme and the implementation of a new series of targeted longer-term refinancing operations (TLTRO II).

 $<sup>^{\</sup>rm 1}$  The survey was conducted before the UK's decision to leave the EU.

Figure 4: Oil and non-energy commodity prices

In June oil and non-energy prices increased further. The price of Brent crude oil has been rising since January, when it reached the lowest level since 2004. In June it recorded the highest levels this year (around USD 50 per barrel). Dollar prices of non-energy commodities also continue to rise.

### **Economic developments in Slovenia**

Figure 5: Short-term indicators of economic activity in Slovenia

At the beginning of the second quarter, most short-term indicators of economic activity in Slovenia increased further. With favourable movements in cost competitiveness and foreign demand, merchandise exports and production volume in manufacturing continued to expand. After several months of decline, activity also rose in construction but remained low. The improvement in labour market conditions and the strengthening of private consumption contributed to further turnover growth in some segments of trade and in tourism-related services. In most other market services, turnover has not increased in the last months. The economic sentiment indicator also indicates a gradual strengthening of activity in most sectors in the next months.

 $Notes: \ ^3External\ trade\ statistics;\ deflated\ by\ ^1MAD,\ ^2balance\ of\ payments\ statistics,\ ^3seasonally\ adjusted,\ ^4working-day\ adjusted\ data.$ 

Figure 6: Merchandise trade - real

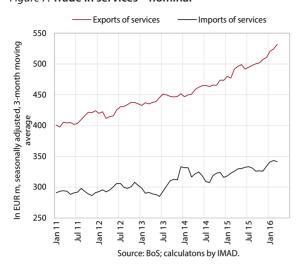

Real merchandise exports and imports continued to rise in April.<sup>2</sup> We estimate that this year's strong export growth stems from exports of most product groups, particularly vehicles and miscellaneous manufactured articles.<sup>3</sup> Growth in merchandise imports was still mainly due to higher exports of consumer goods.

<sup>&</sup>lt;sup>2</sup> The estimate of real merchandise exports was made on the basis of nominal exports according to the external trade statistics and industrial producer prices on the foreign market, while real imports were estimated based on nominal imports according to the external trade statistics and the index of import prices. Detailed data on the structure of merchandise trade for February 2016 are not available yet.

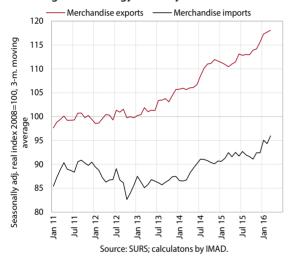

<sup>&</sup>lt;sup>3</sup> Estimated based on the available data for the first three months of 2016. These are exports of SITC sections 78 and 8 (road vehicles) and 8 (miscellaneous manufactured articles).

Figure 7: Trade in services - nominal

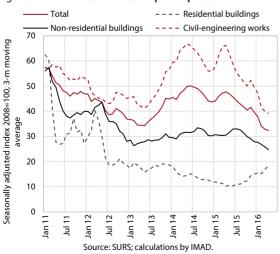

Growth in nominal exports of services continued in April, while growth in imports slowed.<sup>4</sup> The year-on-year growth of exports in the first four months was mainly underpinned by stronger spending of foreign tourists in Slovenia and higher exports of transport and construction services. The year-on-year growth of imports arose primarily from higher imports of technical, trade-related business services.

Figure 8: Production volume in manufacturing industries according to technology intensity

Production volume in **manufacturing** increased further in April. It was up in more technology-intensive industries and, slightly, in low-technology industries. In medium-low-technology industries, where production increased the most at the beginning of the year, growth came to a halt, which we estimate was mainly due to the decline in the metal industry, the largest industry in this group. In the first four months, production in the metal industry was nevertheless 15.6% higher year-on-year (in April 12.6% higher) and, together with the more technology-intensive manufacture of ICT and electrical equipment (18.8% growth), made the largest contribution to the year-on-year production increase in manufacturing.

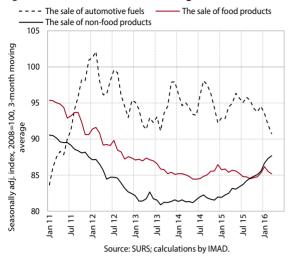

Figure 9: Value of construction put in place

**Construction activity** has decreased significantly in the last year. In April the value of construction put in place rose at the monthly level but remained low. Owing to lower government investment, the value of construction put in place in civil-engineering declined considerably. Since mid-2015 only the construction of residential buildings had been rising, but remained close to last years' lows.

<sup>&</sup>lt;sup>4</sup> According to the balance of payments statistics.

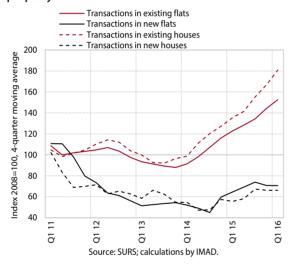

Figure 10: Turnover in retail trade segments

sale of vehicles and other durable and semi-durable nonfood products. These segments also saw strong year-onyear turnover growth in the first four months of the year. The largest increase in turnover (of almost a quarter) was recorded for the sale of motor vehicles, owing to increased sales of new passenger and goods motor vehicles.<sup>5</sup> The sales of telecommunication and computer equipment and household appliances were also higher, by around one-tenth. Nominal turnover in wholesale trade, having stagnated since summer 2015, was similar to that one year earlier. Turnover in the sale of automotive fuels and the sale of food remained lower year-on-year.

In April, distributive trades recorded further growth in the

Figure 11: Transactions in new and existing residential property

Residential property sales were up year-on-year again in the first quarter. The sales of existing residential properties<sup>6</sup> (houses and flats), which were otherwise seasonally lower than in the last quarter of 2015, were almost one-third higher. The number of transactions in newly built residential properties remained low (and slightly lower than in the same period of 2015).

Figure 12: Prices of new and existing dwellings

Residential property prices rose in the first quarter and were up year-on-year. Prices of all dwelling types were higher than in the last quarter of 2015, except for new flats. These declined with the sale of flats from the bankruptcy estate, but remained up year-on-year. The largest year-on-year increase was observed for existing flats in Ljubljana (up 5.9%). Prices of houses remained lower year-on-year despite growth in the last two quarters.

<sup>&</sup>lt;sup>5</sup> After three years of growth, the sales to legal entities have been declining year-on-year since March, while the sales to natural persons, which strengthened only last year, continue this year. After last year's strong growth, the number of first registrations of new goods motor vehicles and goods trailing vehicles also increased further (by around one-third).

<sup>&</sup>lt;sup>6</sup> These account for more than 90% of all transactions.

**Current Economic Trends** 

Figure 13: Nominal turnover in market services (other than trade)

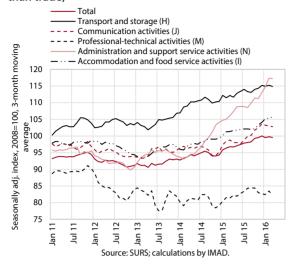

Figure 14: Selected indicators of household consumption

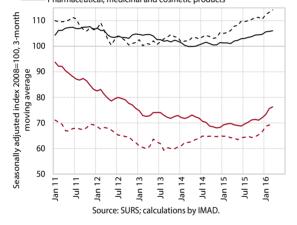

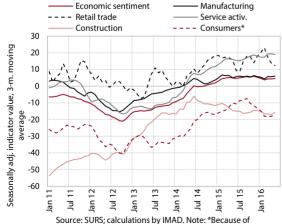

Figure 15: Business trends

methodological changes, since Jan 2016 data on consumer confidence are not comparable with previous data.

Amid turnover growth on foreign markets, nominal turnover in market services stagnates this year. The stagnation is mainly due to information-communication, transportation and professional-technical services. According to our estimate, turnover growth on foreign markets continued, particularly in computer services, while it slowed in transportation. Turnover on the domestic market declined, which was also reflected in slower turnover growth in legal-accounting and management-consultancy services. The strong turnover growth in employment services, which mostly provide workers to the manufacturing sector, increased further. The favourable developments in accommodation and food service activities continued, boosted by increased spending of domestic and foreign tourists.

In April household consumption continued to rise. With further growth in disposable income, the higher consumption showed particularly in higher sales of passenger cars and durable goods related to residential construction and home furnishings. Purchases of sporting and recreational goods and of clothing and footwear also increased further. With a higher number of domestic tourist overnight stays, 10 expenditure on tourism-related services was also up.

**Economic sentiment** remains above its long-term average. In the first half of the year, confidence deteriorated only in retail trade, but remained above the long-term average, as in other sectors.

<sup>&</sup>lt;sup>7</sup> J 62 – Computer programming, consultancy and related activities (SKD 2008).

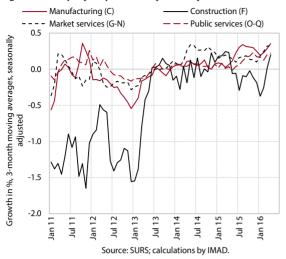

<sup>&</sup>lt;sup>8</sup> M69 – Legal and accounting activities; M70.2 – Management consultancy activities (SKD 2008).

<sup>&</sup>lt;sup>9</sup> N78 – Employment activities (SKD 2008).

 $<sup>^{10}</sup>$  In April, the number of domestic tourist overnight stays was up 8.5 % year-on-year.

### Labour market

Figure 16: Employed persons by activity

Amid higher confidence in the economy, the **number of employed persons**<sup>11</sup> continued to increase in April. The confidence in economic recovery is also reflected in higher expectations regarding employment in the next months. Further growth in the number of employed persons was recorded in most private sector activities, again particularly in manufacturing, 12 distributive trades, accommodation and food service activities and transportation. In public service activities, their number was higher year-on-year in the first four months, particularly in the sectors of health and education (in preprimary and primary education).

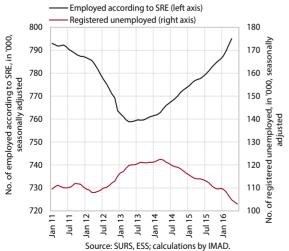

Table 3: Indicators of labour market trends

Table 5. Illuicators of labour market trends				
change, in %	2015	IV 16/III 16	IV 16/IV 15	I-IV 16/I-IV 15

Sources: ESS. SURS; calculations by IMAD.

Note: ¹seasonally adjusted, ² Persons in paid employment, self-employed persons and farmers.

Figure 17: Employed according to SRE and registered unemployed

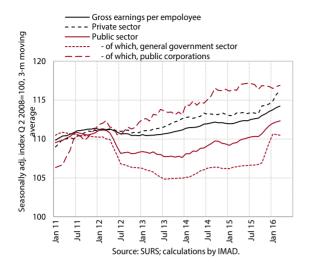

In June the number of **registered unemployed** continued to decline. The main reason was the outflow from unemployment into employment, which strengthened slightly in the months to June. The outflow in the first half of the year was also larger year-on-year. The inflow into the unemployment register was smaller, largely owing to a smaller inflow of those who lost work and first-time jobseekers. At the end of June, the number of unemployed was 9.5% lower year-on-year, 99,795 persons being registered as unemployed.

<sup>&</sup>lt;sup>11</sup> According to the Statistical Register of Employment; these are persons in paid employment and self-employed persons except farmers.

Most employment services workers were assigned to manufacturing, according to our estimate. Year-on-year growth in the number of employment services workers is otherwise slowing, which could be a consequence of increased direct hiring in other sectors.

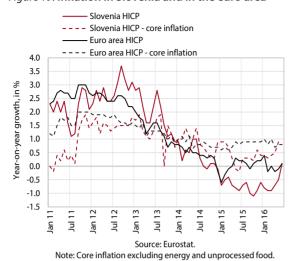

Figure 18: Average gross earnings per employee

In the first four months, both sectors recorded the largest year-on-year growth of **earnings** in five years. After strengthening for a long period, the growth of average gross earnings per employee came to a halt in April. Private sector earnings dropped slightly, after rising notably in the last two quarters under the impact of good business performance in the previous year. Earnings in the public sector also fell somewhat, but remained similar to December when they rose owing to public servants' promotions.

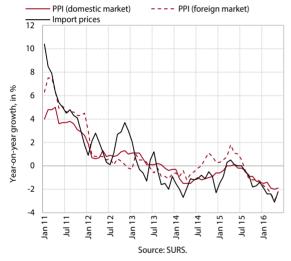

### Prices

Figure 19: Inflation in Slovenia and in the euro area

In June consumer prices rose year-on-year for the first time in one and a half years. The main contribution to growth (0.3%) came from higher prices of services; particularly the year-on-year growth of the prices of package holidays has been strengthening in the last few months. The negative contribution of energy prices was also smaller. This was reflected in core inflation, which has come close to the core inflation in the euro area in the last few months. Higher than in the same period of 2015 were also prices of semi-durable goods and, for the first time this year, food; prices of durable goods have been lower for quite some time. Similar price growth was also recorded for the euro area. It was underpinned by higher prices of services, food and semi-durable and durable goods, while the decline in energy prices has slowed in the last few months.

Figure 20: Industrial producer prices and import prices

Industrial producer prices on the domestic and foreign markets and import prices remained down year-on-year in May. Industrial producer prices were lower particularly in the metal industry. In most other sectors prices are gradually approaching the levels of the same period in 2015; in some smaller sectors they were already higher. The decline in import prices has also slowed in the last months, owing to a smaller year-on-year fall in commodity prices on world markets.

Table 4: Consumer price growth, in %

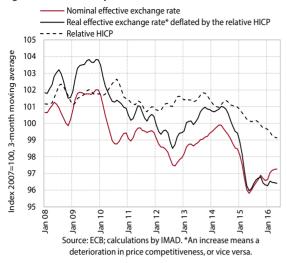

in %	2015	VI 16/V 16	VI 16/VI 15	
Total	-0,5	0,6	0,3	
Food	1,5	0,2	1,0	
Fuels and energy	-6,7	1,5	-5,6	
Services	0,7	1,1	2,5	
Other <sup>1</sup>	-0,1	0,1	0,1	
Total excluding food and energy	0,3	0,5	1,1	
Core inflation – trimmean <sup>2</sup>	0,0	0,3	0,6	
Administered prices <sup>3</sup>	-9,8	2,7	-7,7	
Tax impact – contribution in percentage points	-0,2	0,0	0,2	

Source: SURS, Ministry of Economic Development and Technology; calculations by IMAD

Notes: Clothing, footwear, furniture, passenger cars, alcoholic beverages, tobacco, etc.; The trimmean approach excludes the share of extreme price changes in each month. The optimum share is determined as a difference between the moving average and the calculated trimmed mean in the period of the last five years. The calculation includes prices formulated on the basis of price mechanisms according to the Price Control Act, and prices under direct government control (oil derivatives, railway transport, school books, tolls).

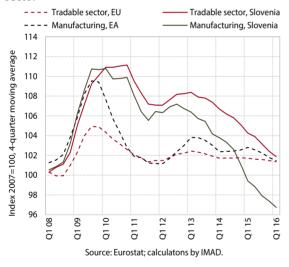

**Current Economic Trends** 

Figure 21: Price competitiveness

Despite the appreciation of the euro, the **price competitiveness** of Slovenia's economy remains favourable. In May the appreciation of the euro against the currencies of most main trading partners continued, so that the nominal effective exchange rate increased further. However, a further decline in relative consumer prices significantly mitigated the growth of the real effective exchange rate, which therefore remained close to the lowest levels in 2015 and stimulative for Slovenian exporters.

Figure 22: Real unit labour costs (RULC) for the tradable sector

In the first quarter of this year, the cost competitiveness of the tradable sector improved further,<sup>14</sup> particularly in manufacturing, the sector that is the most exposed to foreign competition. The improvement was a consequence of strong productivity growth, which enabled wage growth and a concurrent improvement in the competitive position of the tradable sector. The latter holds particularly true for its most export-oriented part, the manufacturing sector. The decline in cost pressures in manufacturing in the last years has been more pronounced than in the EU as a whole, so that Slovenia has already reached a lower level of unit labour costs in this segment of the economy.

Figure 23: Real unit labour costs (RULC) in the economy

13 In Slovenia, compared to those in its trading partners.

of 2015.

At the level of the **entire economy**, **unit labour costs** did not decline further in the first quarter, for the first time in several years. They were up 0.4% year-on-year, <sup>15</sup> their growth arising solely from the non-tradable sector. The largest year-on-year increase was recorded for the construction sector, owing to a strong fall in value added. The indicator for the entire economy also indicates an interruption of favourable trends compared with the EU average, where unit labour costs remained at the level of the first quarter

<sup>&</sup>lt;sup>14</sup> Year-on-year decline in unit labour costs of 2.1 %.

<sup>15</sup> Year-on-year growth in unit labour costs of 3.2%.

Table 5: Indicators of price and cost competitiveness

Source: SURS; calculations by IMAD.

Note: <sup>1</sup> Against 37 trading partners, according to ECB data.

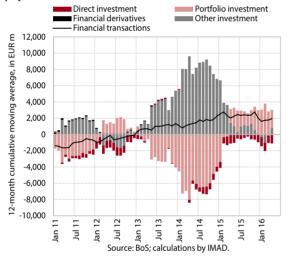

### **Balance of payments**

Figure 24: Components of the current account of the balance of payments

The current account surplus widened further. In the twelve months to April, it amounted to 7.9% of estimated GDP and was the highest thus far. Its year-on-year widening in the first four months was mainly underpinned by favourable export trends, accompanied by the otherwise weak growth of imports owing to the relatively modest domestic consumption. The deficit in primary income was up year-on-year primary due to the lower receipts from the EU budget, while the deficit in secondary income was down particularly owing to the lower net payments of contributions and taxes to the rest of the world.

Figure 25: Financial transactions of the balance of payments

The **financial account** of the balance of payments recorded a net outflow again. In the first four months a part of the private financial sector increased financial investments in foreign securities, which is mainly linked to the excess liquidity on the domestic money market. The government repaid another portion of long-term liabilities to foreign portfolio investors. Among inflows, foreign direct investors increased investments in the Slovenian banking sector.

Table 6: Balance of payments

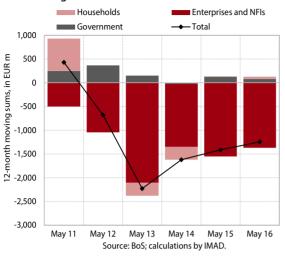

Table 0. Datafice of payments									
I-IV 2016, in EUR m	Inflows	Outflows	Balance	Balance, I-IV 15					
Current account	10,749.9	9,754.0	995.9	683.7

Source: BoS

Note: The methodology of the Slovenian Balance of Payments and International Investment Position statistics follows the recommendations in the sixth edition of the Balance of Payments and International Investment Position Manual published by the International Monetary Fund. On the current and capital accounts, the term "inflows" means total receipts and the term "outflows" means total expenditures; "balance" is the difference between inflows and outflows. On the financial account, "outflows" mean assets, while "inflows" mean liabilities abroad; "balance" is the difference between outflows and inflows and outflows, the increase is recorded with a plus sign and the decrease with a minus sign.

### Financial markets

Figure 26: Changes in the volume of loans to domestic non-banking sectors

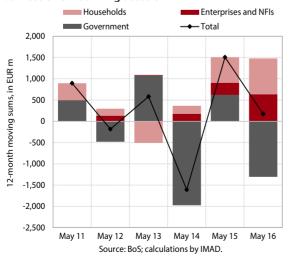

The decline in domestic non-banking sector loans is easing; the quality of banks' assets is improving.16 The year-on-year contraction in the volume of corporate and NFI loans continues (between EUR 1.4 billion and EUR 1.5 billion since the end of last year). Corporate and NFI deleveraging abroad is slowing, as the net inflows of short-term loans increase, while the net repayments of long-term loans decline. The volume of household loans in Slovenia's banking system has risen slightly as a consequence of growth in new loans, while the decline in new loans to non-financial corporations has come to a halt in the last few months. The volume of nonperforming claims continues to fall. At the end of April, it totalled EUR 2.7 billion and accounted for 8.0% of the banks' total exposure, which is 3.6 percentage points less than in the same period of 2015.

Figure 27: Changes in the volume of deposits by domestic non-banking sectors

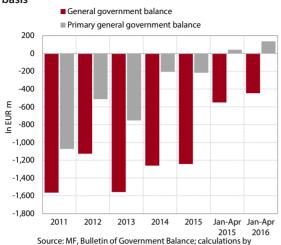

Among sources of finance, banks continue to repay their liabilities abroad while non-banking sectors increase deposits. The sum of bank debt repayments abroad in the twelve months to April dropped to EUR 1.1 billion, which is around one-fifth less than in the same period of 2015. Net repayments of loans slowed the most but still accounted for almost half of all net repayments. Similar to enterprises and NFIs, banks also recorded an inflow of short-term loans, but it was smaller. Non-banking sector deposits increased particularly owing to further growth in overnight deposits.

<sup>16</sup> The transfer of assets to the BAMC excluded.

### **Public finance**

Figure 28: General government balance on a cash flow basis

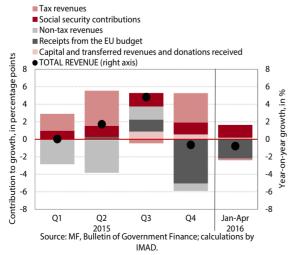

The general government deficit on a cash basis in the first four months was lower than in the same period of 2015. This was mainly related to the improvement in the economic situation and the end of the previous and the beginning of the new financial perspective of the EU.<sup>19</sup>

Figure 29: Revenue growth and contributions of individual categories to growth

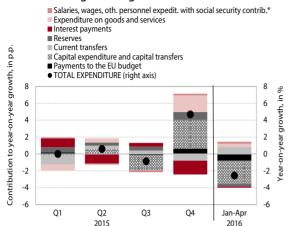

General government revenue in the first four months was down slightly year-on-year. The bulk of its 0.8% decline stems from lower receipts from the EU budget; tax revenues also fell, but to a lesser extent. Their fall was mainly due to the postponement of the payments of corporate income tax and excise duties to May.<sup>18</sup> The improvement in the economic situation shows in rising revenues from social contributions, personal income tax and VAT.

<sup>&</sup>lt;sup>17</sup> In the first months of 2016, Slovenia still recorded receipts from the EU budget from the previous perspective of the EU (but no payments); there was also no significant expenditure (investment) under the new perspective of the EU yet.

The bulk of its 0.8% decline stems from lower receipts from the EU budget; tax revenues also fell, but to a lesser extent. Their fall was mainly due to the postponement of the payments of corporate income tax and excise duties to May. The improvement in the economic situation shows in rising revenues from social contributions, personal income tax and VAT.

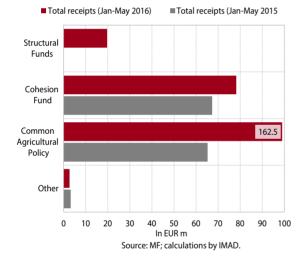

Figure 30: Expenditure growth and contributions of individual categories to growth

Source: MF, Bulletin of Government Finance; calculations by IMAD. Note: \* Labour costs include social contributions paid by the employer.

General government expenditure declined year-on-year in the first four months. The bulk of the 2.2% decline stemmed from lower investment owing to the delay in EU funds absorption at the beginning of the implementation of the new financial perspective of the EU, and lower payments into the EU budget. Slight declines were also recorded for interest expenditure (owing to the more favourable structure of public debt with regard to the interest rate) and transfers into reserves. Expenditure on goods and services was up year-on-year this year, after the containment, which was particularly pronounced at the beginning of 2015. Transfers to households were also higher, as a result of the partial removal of austerity measures. Expenditure on goods and services was up year-on-year this year, after the containment, which was particularly pronounced at the beginning of 2015. Transfers to households were also higher, as a result of the partial removal of austerity measures.

Figure 31: Receipts from the EU budget, January – May 2015 and 2016

Slovenia's net **budgetary position against the EU budget** was positive in the first five months (at EUR 98 million). Slovenia received EUR 288 million from the EU budget in this period. More than half of receipts were funds paid out under the common agricultural and fisheries policies. From the cohesion fund, only the resources from the previous financial perspective were reimbursed this year (EUR 78 million); there were no reimbursements from the new perspective yet. The bulk of receipts from structural funds were paid out from the European Regional Development Fund.

<sup>&</sup>lt;sup>19</sup> Owing to the transfers of some initial resources to the new water protection and climate change funds at the beginning of 2015, the transfers into reserves at the beginning of 2016 were lower year-on-year. <sup>20</sup> In 2016, child benefits in the 5th and 6th income brackets, social assistance in cash, the eligibility criteria for state scholarships, care supplement to pensions and subsidies for school meals were raised. There was also an extraordinary adjustment of pensions (0.7%).

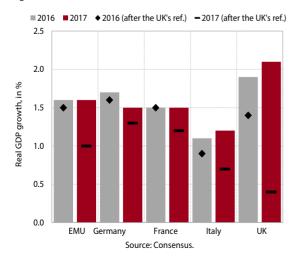

### The United Kingdom's referendum decision to leave the EU

The UK's referendum decision to leave the EU increased financial market volatility and uncertainties about the economic and political situation in Europe. According to international institutions, a protracted process of withdrawal would have negative implications for both the EU and the UK. The exit would mainly have an indirect impact on Slovenia's economy, through lower demand for Slovenia's goods and services as a result of the expected decline in GDP growth of Slovenia's main trading partners.

The referendum result has already affected international financial markets. The British pound has dropped to the lowest level in more than 30 years. Financial conditions on international markets have tightened. The yields on the German 10-year bond declined and the government bond yield spreads in the peripheral countries of the euro area increased. The ratings agency Standard&Poor's has already lowered the credit ratings for the UK and the EU; similar reductions have also been announced by other agencies.

International institutions estimate that the UK's withdrawal from the EU would bring uncertainty to the broader economic and political environment. OECD and ECB simulations show negative economic implications for the EU and the euro area. According to these two institutions, the expected GDP growth in the EU would decline between 0.5 and 1 percentage points in 2016-2018. Consensus panellists expect no significant impact on economic growth in the euro area for this year (-0.1 percentage points); for 2017 they expect a decline of 0.6 percentage points. Among Slovenia's main trading partners, Italy is expected to be affected the most, as its GDP growth would be 0.5 percentage points lower in 2017. The estimates and simulations of all these institutions were made before the referendum result was announced.

Long-term economic consequences of the UK's exit are uncertain and depend on the outcome of negotiations with the EU. International institutions predict that it will take at least two years for exit negotiations to be formally concluded. In their opinion, the most favourable scenario for both sides is reaching an agreement similar to those concluded between the EU and Norway, Island and Lichtenstein, as the UK would remain part of the single market through membership of the European Economic Area. An agreement like that would however bring no major changes regarding the free movement of persons, goods, services and capital. To retain full access to the single market, the UK would still have to contribute financially to the EU budget (albeit less than now), but would have no right to vote on legislative procedures. The second best scenario for the EU economy is to adopt a model similar to that of Switzerland (within the European Free Trade Association), which governs the economic relations with the EU by bilateral agreements, through which it has direct access to the single market. The least favourable option from an economic perspective is that the UK starts to operate under the general WTO rules.

The UK's exit from the EU will mainly have an indirect impact on Slovenia's economy. It is expected to affect economic growth in our main trading partners, which will be reflected in lower demand for our goods and services. The direct impacts will be smaller, the trade between the two countries being relatively low. The value of Slovenia's exports to the UK amounts to EUR 600 million at the annual level, which ranks the UK to 12<sup>th</sup> place among our trading partners<sup>1</sup>.

### Tourist arrivals and overnight stays in 2015

In 2015 the number of tourists<sup>2</sup> in Slovenia approached 4 million and the number of their **overnight stays** exceeded 10 million for the first time. Since 2010 the numbers of tourists and their overnight stays have been rising as a consequence of more foreign tourist arrivals, as Slovenia became more recognisable abroad. This was reflected in higher inflows from travel, which reached EUR 2,245 million in 2015 (EUR 1,827 million in 2008). The number of domestic tourist arrivals increased slightly only last year, with the improvement in the economic situation and higher household spending. The average length of stay<sup>3</sup> in Slovenia continued to decline in 2015. We estimate that, in addition to the more frequent shorter stays of both domestic and foreign tourists, this was also due to a higher number of tourists from more distant countries, who visited several touristic places in Slovenia and stayed there overnight.4

 $<sup>^{\</sup>mbox{\tiny 1}}$  The United Kingdom is the 2nd largest trading partner of the euro area.

<sup>&</sup>lt;sup>2</sup> I.e., the number of tourist arrivals, as tourists are registered on their arrival to any tourist accommodation where they spend the night. It can therefore happen that their registration in a place/country is multiplied.

<sup>&</sup>lt;sup>3</sup> In 2008, the average length of stay was 3 nights; in 2015, 2.6 nights.

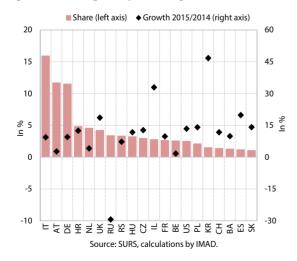

<sup>&</sup>lt;sup>4</sup> Tourists who stay in several tourist establishments during their vacation in Slovenia can be registered as tourists more than once, which impacts the calculations of the average number of overnight stays per tourist (for example, a tourist who spent five nights in five different tourist establishments is registered as five tourists with one average overnight stay).

Figure 33: Number of overnight stays in Slovenia, 2008–2015

The number of foreign tourist arrivals rose in all tourist destinations, except health (spa) resorts. As it has become more recognisable abroad, tourist arrivals in Ljubljana increased most notably again (by 16.3 %), so that the number of foreign tourist overnight stays in Ljubljana, for the first time, approached 1 million in the year as a whole. Among countries that are important for Slovenia's tourism,<sup>5</sup> overnight stays of tourists from China, Korea and other Asian countries - which account for around onetenth of all foreign tourist overnight stays in Ljubljana - increased significantly. Owing to the much warmer summer season than in 2014, notably more tourist arrivals (13.0%) were also recorded for mountain resorts. The number of overnight stays in health resorts fell, owing to a further decline in the number of Russian tourists due to the Ukraine-Russian crisis and the depreciation of the rouble.

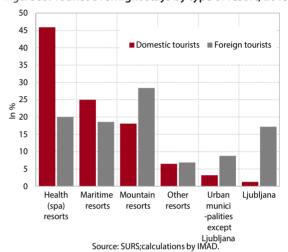

Figure 34: Overnight stays of foreign tourists, 2015

<sup>&</sup>lt;sup>5</sup> Tourists from these countries account for at least 1% of all foreign overnight stays.

Last year domestic tourist arrivals increased in all tourist destinations. The largest increases were recorded for mountain resorts (15.9%), as well as Ljubljana and other urban municipalities, where the number of overnight stays was the highest on record. With last year's growth, the number of overnight stays in seaside resorts approached 1 million.

Figure 35: Tourist overnight stays by type of resort, 2015

### Slovenia's competitiveness according to IMD 2016

Slovenia's ranking according to the IMD World Competitiveness Yearbook 2016 improved significantly for the second consecutive year. This year's report monitors 264 indicators,6 among which statistical data represent a weight of approximately one-half, the rest being data from surveys. As in previous years, Switzerland, the US, and highly developed Asian economies (Hong Kong, Singapore) top the list (and among the EU countries, Sweden, Denmark and Ireland). Slovenia has moved to 43rd place among the 61 countries analysed, which is six places higher than last year. In the last two years, it has advanced 12 places, which is the largest change among the countries analysed but nevertheless still 11 places lower than in 2008.7 The improvement was mainly related to the more favourable economic situation and thus higher confidence of respondents. This is mainly reflected in an improvement of survey-based indicators.

Slovenia has improved its rankings in most areas, but the key weaknesses of its international competitiveness remain government efficiency and business efficiency. The report finds Slovenia's key competitive advantages in its well

<sup>&</sup>lt;sup>6</sup> Of more than 300 indicators listed in the IMD report, 264 were used in calculating the world competitiveness index; 145 indicators are based on statistical data and 119 on survey data. Statistical data are mainly based on figures for 2015, while the surveys were conducted at the beginning of 2016.

<sup>&</sup>lt;sup>7</sup> In 2008, 55 countries were included in the analysis.

Note: "Rank" means Slovenia's ranking among 55 countries in 2008, 59 countries in 2011 and 2012, 60 countries in 2013 and 2014, and 61 countries in 2015 and 2016; "+" means a rise in ranking relative to the previous year, "-" indicates a fall while "o" means that there was no change.

Figure 36: Comparison of Slovenia's and EU countries' competitiveness according to IMD – the overall indicator

Source: IMD. Note: The value of the IMD world competitiveness indicator is between 0 and 100. A higher value is better.

educated workforce and reliable infrastructure, while the main obstacles to its international competitiveness are inefficient government and public administration, an inefficient legal and regulatory framework and noncompetitive tax policy.

After last year's improvement, Slovenia's rankings in economic performance remained practically unchanged this year (43rd rank). Slovenia continues to score low in domestic economy and employment, the areas where it has slipped by as many as 20 places since the beginning of the crisis. Developments in these areas were positively affected by some key macroeconomic indicators. Despite the improvement in indicator values, the rankings remained unchanged, as other countries also made progress in these areas. In the area of international investment, inward FDI remains modest, but the managers surveyed seem to be less pessimistic when it comes to moving production, services and research abroad, as these indicators reached the highest values in

three years. Meanwhile, the ranking in international trade has improved, which can be attributed to the higher values of export competitiveness indicators (world market share, unit labour costs) and the increased current account surplus.

Government efficiency, which is essential for the proper functioning of the economy, has improved in Slovenia in comparison with other countries (45th place). The improvement is attributable to the area of public finance, where the indicators have improved in the last two years as a result of stronger economic growth, a smaller impact of one-off factors, and measures, which were mostly temporary (by 6 places in the last year). Managers surveyed also found last year's public finance management the best in five years. However, they remain highly dissatisfied with the tax policy, particularly the high taxation on employment. They are still dissatisfied with institutional competitiveness, particularly the functioning of government institutions, the low adaptability of government policies to changes in the economy, bureaucracy, and the level of corruption. Although the values and rankings remain low, the survey shows improved confidence in these areas. Higher confidence is also reflected in higher rankings in business legislation and societal framework. However, managers still cited labour market legislation as a significant obstacle to their business operations.

Slovenia's ranking in business efficiency has improved (53rd place), but Slovenia remains one of the lowest ranking countries in this area. This has to do not only with the lack of corporate values and basic ethical practices, but also deficiencies related to business finance (banking and financial services, access to financial services for businesses) and labour market regulation. Slovenia continues to be at the bottom of the scale in corporate governance, particularly regarding the effectiveness of corporate boards, credibility of managers and political interference in the management of public companies, as well as in terms of employment opportunities for promising workforce. A slight improvement has also been seen in indicators and rankings in the financial area, but managers continue to estimate financial risks in Slovenia as high in comparison to other countries analysed.

Slovenia scores best in infrastructure (30th) and has improved its ranking in this area again. The report highlights education, health, environment and scientific infrastructure as Slovenia's main strengths in this category. In recent years it has increased the volume of R&D investment. The number of researchers and the share of population with tertiary education have risen too. Significant progress in comparison with other countries has also been made in the area of technological development, but the main obstacle remains knowledge transfer to the business sector.

Source of data: SURS, PDII, ESS. Note: <sup>1</sup>In January 2005, the SORS adopted new methodology of obtaining data on persons in paid employment. The new source of data for employed and self-employed persons excluding farmers is the Statistical Register of Employment (SRE), while data on farmers are forecast using the ARIMA model based on quarterly Figure for farmers from the Labour Force Survey.

Source of data: SURS, ECB; calculations by IMAD.

Note: ¹The structure of groups varies. Data for individual years are not fully comparable to those published previously. On 1 July 2007, the electricity market was liberalised.

²After a longer period of unchanged prices, at the beginning of 2013, the Decree on the pricing of mandatory local public services in the field of environmental protection
(Official Gazette of the RS, No. 87/2012) transferred the responsibility for approving price changes to local communities. ³ Change of the source for effective exchange rate series as of April 2012: a new source, ECB; ⁴ Harmonised effective exchange rate – a group of 20 EU Member States and 17 euro area countries; an increase in value indicates appreciation of the national currency and vice versa.
